PREFACE

IN this volume, we are giving you a partial application of the principal tariffs applying within and from the Western Classification Territory, to other points.

The tariffs applying within and from the Western Classification Territory to other points, not provided for herein, will be treated in a subsequent volume.

In this part of the work, we have covered the application of tariffs within the Western Trunk Line Territory, showing (1) the application of the principal tariffs published by the Western Trunk Line Committee and the individual carriers, (2) the tariffs applying from St. Paul, Minneapolis, Minnesota Transfer and Duluth, Minn., Superior and Ashland, Wis., also from the Missouri River Crossings, and points in the States of Iowa, Minnesota and Missouri, to various points in the United States, Canada and Mexico, (3) the application of tariffs applying within the Trans-Missouri Freight Bureau Territory, from points in Colorado and Utah, Pacific Freight Bureau Territory and Trans-Continental Freight Bureau Territory, to all other sections of the Continent.

In a work of this character, it is not necessary to give specific reference to each and every tariff containing rates within and from the different sections of the country. As a general proposition, the method of tariff publication does not change, and, once you are in touch with the method of

publication, it is an easy matter to determine the proper tariff to use in a given case.

It should be borne in mind that where no through rates are published, on Interstate Traffic, the lowest legal combination is the proper rate to use, taking into consideration the fact that all factors in the rate must be legally published and on file with the Interstate Commerce Commission.

In presenting this work we deem it fitting to say that to the best of our knowledge this information has never before been published in the manner in which we have presented it. While there have been many theoretical and economic treatises written regarding railroad rates, nothing has been ever attempted to actually show what tariff names the rate on a shipment between two given points.

Perhaps the most striking illustration of the value of the information which we are furnishing is this: A man handling traffic in St. Louis, Mo., for instance, can determine from this work what tariff will name the rate on a shipment from Fort Smith, Ark., to Minneapolis, Minn., etc.

It is a well known fact that the biggest problem confronting the shippers and carriers is knowing which tariff actually names the rate. This is the kind of information we furnish. Without such knowledge the efficient handling of practical traffic work is impossible.

(1) **Class and Commodity Rates from Utah Common Points to** Minnesota Transfer, are published by the Trans-Missouri Freight Bureau in Tariff No. 20 Series. If the shipment is destined to a point in North Dakota, on the Northern Pacific Railway, class and commodity rates **from** Minnesota Transfer **to** North Dakota Points, are published by the Northern Pacific Railway, in Tariff No. 413 Series. In arriving at the combination, therefor, the rates published by the Trans-Missouri Freight Bureau **from** the Utah Common Points **to** Minnesota Transfer, and those published by the Northern Pacific, **from** Minnesota Transfer **to** the various points of destination in North Dakota, on the Northern Pacific, would be added together to make through rates. Or, for example, if the shipment originated in Salt Lake City, and was destined to Fargo, N. D., combination rates could be made on the Missouri River Crossings, by using the rates published **from** the Utah Common Points, **to** the Missouri River Crossings, by the Trans-Missouri Freight Bureau, and the rates published by the Northern Pacific in Tariff No. 230 Series, **from** the Missouri River Crossings **to** Fargo. These rates should be added together to make a through rate, the lowest legal combination being the proper rate to apply when shipments are properly routed.

The tariffs of the Great Northern Railway, and other lines operating **from** Minnesota Transfer **to** North Dakota Points, are published in a similar manner to those of the Northern Pacific Railway.

(2) **To** South Dakota there are no through rates, and the combinations may be made on the Missouri River Crossings. The rates **from** Utah Common Points **to** the Missouri River Crossings, are published by the Trans-Missouri Freight Bureau, in Tariff No. 120 Series, and the

specific commodity tariffs issued by the Trans-Missouri Freight Bureau.

The rates **from** the Missouri River Crossings, **to** South Dakota Points, are published as shown in another section of this volume, under the heading, "Application of Tariffs from Missouri River Crossings to South Dakota Points." The rates published in these tariffs are to be added to the rates published by the Trans-Missouri Freight Bureau in Tariff 20 Series, to make through rates.

§ 19. Application of Tariffs from the Utah Common Points to Points in Canadian Northwest Territory.

There are no through rates **from** the Utah Common Points, **to** points in the Canadian Northwest. Combination rates may be made on Minnesota Transfer by using the rates published in Trans-Missouri Tariff No. 20 Series, applying **from** the Utah Common Points, **to** Minnesota Transfer; and the tariffs of the individual carriers operating **from** Minnesota Transfer, either direct or through their connections, **to** points in the Canadian Northwest; except that the rates **from** Minnesota Transfer **to** British Columbia Coast Terminals, are published by the Trans-Continental Freight Bureau, in West-Bound Tariff No. 4 Series.

Combination rates can also be made on Spokane, by using the rates published **from** the Utah Common Points **to** Spokane, by the Oregon-Washington Railroad and Navigation Company, in Tariff No. 67 Series, and the rates published **from** Spokane **to** points in the Canadian Northwest, by the Spokane International Railway, in Tariff No. 122 Series.
